

WANT SOLAR?

WATERLOO UTILITIES CAN HELP. WE RECOMMEND THESE BEST PRACTICES.

Reach out to us. We can help you think through important questions like: Should my solar array be ground or roof mounted? Would my solar project receive any shading? What types of incentives am I eligible for?

Contact local solar installation companies. Utility staff can help you find local contractors and review proposals.

Select your contractor. We recommend getting at least three quotes to compare total costs and payback periods of different systems.

Complete required Public Service Commission documents. We can work with you and your contractor to ensure all proper paperwork is completed and submitted on time.

Obtain local permits. All solar arrays require a building permit, and some may require Plan Commission approval. Commercial roof top systems require a structural analysis. Contact the Utility office for information and paperwork.

Installation and inspection. Upon final installation of your solar equipment, a final inspection is required by our local building inspector and Waterloo Utilities.
